Serverless solution with built–in rugged SSD

SolidEDGE is a serverless cloud managed solution designed for professional surveillance applications. It comes equipped with a built–in rugged SSD (Solid State Drive) that allows for local storage of video footage and an embedded Wisenet WAVE VMS server.

Cloud video management with WAVE sync

The SolidEDGE system can be merged with other SolidEDGE systems through WAVE sync, giving additional flexibility to the system. This feature enables remote access and management of on–premise security systems from anywhere in the world. Wave sync also keeps the system up–to–date with regular software and security updates.

Flexible system structure

Each SolidEDGE camera can connect with up to 5 additional Hanwha cameras or third–party ONVIF conformant cameras, enabling organisations to easily expand their surveillance systems as requirements evolve. This brings the total number of cameras per SolidEDGE system to 6 and offers a more customisable and flexible system structure. The SolidEDGE camera includes a Wisenet WAVE licence, which syncs with the additional cameras integrated with the SolidEDGE system.

SSD status management

The built-in rugged SSD of the SolidEDGE camera offers high-speed and reliable storage for video data. The SSD status management feature, which can be accessed from the camera web viewer, provides information on the health of the SSD drive, ensuring the system is running smoothly.

Specification

PNV-A6081R-E1T, PNV-A6081R-E2T

- Based on 2MP P AI series camera
- 1TB / 2TB SSD storage options available
- 1x Professional WAVE license pre-loaded
- Encrypted software updates are provided to the camera to ensure best cyber security
- 2MP, 4.4~9.3mm motorized V/F lens
- Support H.265/H.264/MJPEG
- WiseIR 40m
- Next level cybersecurity
- Device Certificate (Hanwha Vision Root CA, pre-installed)
- TPM 2.0 (FIPS 140-2 level2 certified), Secure OS/boot/storage, Verified FW forgery
- Support PoE+/12VDC
- Hard-coated dome bubble
- IP66/IP67/IP6K9K, NEMA 4X, IK10
